

VILLA LEV GROUP

Portfolio Expansion · Antiparos, Greece
Commercial Loan Application · Optima Bank · March 2026

€6,174,000 Total Investment <i>2 villa projects + 1 boutique suites hub</i>	€4,630,500 Loan Requested <i>75% coverage · 13-year repayment · 2-year grace</i>	€1,543,500 Owner Equity <i>25% contribution</i>
≥€8,550,000 Completed Asset Value <i>@ €9,000/m² · 950m² built</i>	~54% LTV at Completion <i>Asset covers loan 1.85× at completion</i>	1.85× Asset Coverage <i>Value + loan · €2.64M buffer at stress test</i>

An expansion of a proven operation. Villa Lev generated €298,000 in revenue at an ADR of €3,800 in 2025 — its fifth consecutive year of growth. Refused bookings exceeded €300,000 that year. By March 2026 they have already reached €500,000. This project converts documented, irrecoverable demand into structured, financeable capacity.

THE LOAN REQUESTTotal project cost **€6,174,000**Loan requested (75%): **€4,630,500**Owner equity (25%): **€1,543,500**Working capital (revolving): **€400,000**

Term: 15 years · Grace: 2 years · Rate: 5%

THE COLLATERAL CASECompleted portfolio value **≥€8,550,000**LTV at completion: **~54% — loan covered 1.85× by asset value**Basis: €9,000/m² on 950m² built surfaceStress @ €7,650/m²: €7,267,500 — €2.64M above the loan**Loan Purpose — Two Phases**

Phase	Purpose	Amount
Phase 1	Plot acquisition (3 plots) + building permit preparation	€1,350,000
Phase 2	Construction + fit-out (Properties A×2 and B) — activated upon permit issuance	€4,824,000
Working Capital	Revolving credit facility — construction phase, self-liquidating	€400,000

* Operational target: Summer 2028. Villa Lev Group Management operational from Day 1 under long-term exclusive management contracts, with an existing client base providing immediate demand.

Villa Lev is an 8-bedroom luxury property on Antiparos, operational since 2022. It is the top-ranked villa on the island and ranks in the top 5% of all Airbnb properties worldwide. The expansion is not speculative — it is the direct response to five seasons of documented, compounding demand that one property cannot absorb.

Operational Results

Metric	2022	2023	2024	2025
Revenue	€116,000	€165,000	€185,000	€298,000

---	--	--	---

Why the Projections Are Conservative

The financial model uses static, stabilised-year assumptions. It does not apply the compounding growth that Villa Lev has produced over five consecutive seasons.

Metric	Historical Growth	Villa Lev — March 2026	Model Assumption
ADR	+5–10% / year	€4,000	€3,500 (realistic)
Nights Sold	+10–15% / year	~86 nights	95 nights (mature)
Annual Revenue	+15–20% / year	€325,000+ (booked)	Portfolio €1.17M at maturity

By Summer 2028, nights sold will have compounded for two additional years at 10–15% per year. A property achieving 95 nights in its first season would be tracking toward 110+ nights by Year 3 — consistent with Villa Lev's documented trajectory. The model's occupancy assumptions are the floor, not the ceiling.

---	--	--	---

Paros and Antiparos represent the fastest-growing premium destination in the Cyclades. The structural shift of high-end tourism toward Paros is well-documented and accelerating — and is about to be amplified by a transformational infrastructure upgrade.

Airport Arrivals — Structural Shift Toward Paros

Destination	2016	2022	2023	2024	Growth '23→'24
Paros	37,000	100,000	152,500	171,500	+12.5%
Mykonos	~640,000	844,000	829,500	807,000	-2.7%
Santorini	~1,050,000	1,372,500	1,388,000	1,438,500	+3.6%

* Paros arrivals have grown 4.6× in eight years — from 37,000 in 2016 to 171,500 in 2024 — while Mykonos is declining and Santorini growing only modestly. Source: YΠΑΑ, AIA, Fraport.

Three Structural Tailwinds — Not Reflected in This Model

Inflation and ADR drift: Luxury pricing in the Aegean has consistently outpaced inflation. The model uses today's ADR with zero upward adjustment through 2028.

Paros international airport: Infrastructure works to upgrade Paros Airport for direct European flights are already underway. On Mykonos, Santorini, and Zakynthos — islands with established international access — the premium season comfortably exceeds 150 nights. Paros currently runs 90–120 nights. International connectivity will close that gap and materially lift the bookable-nights ceiling per property per year.

Compounding demand: Villa Lev has grown at 15–20%/year for five consecutive seasons. The model assumes a static stabilised year. By Summer 2028, two more years of compounding will have accumulated on top of an already record pace.

None of these tailwinds appear in the financial model. The projections are built on the documented current season length and ADR. Each factor represents independent, unmodelled upside over the operating period.

Hotel ADR Benchmarks — 4 & 5-Star (Paros/Antiparos, Peak Season)

Room Category	Average Peak ADR (Jul–Aug)	Range
Standard rooms	€909	€421 – €2,250
Premium rooms	€1,423	€665 – €2,655
Luxury suites	€2,087	€930 – €3,375

* Property B boutique suites are priced at €700–€1,000 peak — at or below the baseline 4–5-star room rate of €909. The boutique model carries a fraction of a hotel's fixed cost structure, producing comparable or better net margins at a lower price point.

Competitive Villa Landscape — AirDNA (Top 35 Villas, Paros/Antiparos)

Segment	Average ADR	Nights Sold/yr	Avg Annual Revenue
Top 10 villas	€2,800	~105 nights	€295,000

Segment	Average ADR	Nights Sold/yr	Avg Annual Revenue
Top 20 villas	€2,300	~91 nights	€209,000
All 35 villas	€2,230	~80 nights	€179,000
Villa Lev 2026	€4,000+	86+ nights (growing)	€325,000+

Three plots in the Agios Georgios neighbourhood of Antiparos — the same neighbourhood as Villa Lev. All three sit within the official village building limits (οικισμός) under Government Gazette (FEK) designation. Buildability is not a matter of interpretation: it is a direct consequence of the FEK. Permit risk is structurally mitigated through phased financing and conditional Phase 2 drawdown following permit issuance. If permits were delayed, the plots themselves — acquired with Phase 1 funds — serve as collateral for the interim period. All plots have panoramic sea views and are within walking distance of the beach. Negotiations are at an advanced stage on all three.

Portfolio Overview

Property	Plot Cost	Built Area	Programme	Total Investment
Property A — Plot 1: Twin Villas	€400,000	~350m ²	3-bed + 4-bed villas	€2,171,000
Property A — Plot 2: Twin Villas	€400,000	~350m ²	3-bed + 4-bed villas	€2,171,000
Property B — Boutique Suites & Wellness	€400,000	~250m ²	4 suites + hamam/sauna/ gym + events space	€1,682,000
Acquisition legal & due diligence (×3 plots)	—	—	Notary, transfer taxes, title search + permit preparation	€150,000
TOTAL PORTFOLIO	€1,200,000	950m²	4 villas + 4 suites + wellness hub	€6,174,000

Property A — Two Independent Luxury Villas (× 2 Plots)

Each plot carries two fully independent luxury villas — a 3-bedroom (~150m²) and a 4-bedroom (~200m²) — designed for the HNW/UHNW segment. Each villa has its own entrance, kitchen, living areas and private pool. Both can be rented independently or combined as a 7-bedroom estate for larger groups. The programme is identical on both plots.

** Target ADR: €3,500/night combined (net, blended seasonal). Target occupancy: 95 nights/year (mature). Reference: Villa Lev 2026 achieved €4,000 ADR and 86+ nights. Construction basis of €4,000/m² validated by a civil engineer with direct experience in this exact area.*

CAPEX — Detailed Cost Breakdown

Cost Category	Property A (per project)	Property B
Land acquisition	€400,000	€400,000
Construction (350m ² / 250m ² × €4,000/m ²)	€1,400,000	€1,000,000
FF&E (bedrooms, gym, wellness equipment)	€120,000	€100,000
Legal & notary fees	€20,000	€15,000
Architect + interior design	€44,000	€32,000
Civil engineer	€35,000	€25,000
Contingency (10% of construction + FF&E)	€152,000	€110,000

Cost Category	Property A (per project)	Property B
TOTAL INVESTMENT	€2,171,000	€1,682,000

** Contingency at 10% of construction + FF&E — industry standard for new builds on island sites.*

Property B — Boutique Suites, Wellness & Events Hub

Four independently bookable luxury suites — 2 Standard (40m²) and 2 Double (65m²) — with shared wellness facilities: hamam, sauna, semi-outdoor gym. The outdoor areas are purpose-designed for weddings and private events of 70–120 guests. Villa Lev receives over 40 wedding enquiries per year for a single property. With multiple properties and a purpose-built event space, that demand becomes a structured revenue stream.

Suite Type	Area	Peak ADR (Jul–Aug)	Blended Seasonal ADR	Positioning
Standard Suite (×2)	40m²	€700/night	~€608/night	At hotel entry-level (avg 4–5★: €909)
Double Suite (×2)	65m²	€1,000/night	~€869/night	Premium — 43% above standard suite

** All ADR figures are net of OTA commissions, VAT, and guest taxes. TAK climate resilience tax is collected from guests and remitted — no P&L impact.*

Weddings, Events & Retreats — Unmodelled Upside

The platform extends into retreat and shoulder-season demand that Property B is specifically designed to serve: hamam, sauna, gym, and a semi-enclosed events space that accommodates groups of 8–30 in formats that retreat operators actively seek. The Cyclades shoulder seasons — April and October — are increasingly booked by wellness operators for exactly this format. None of this revenue is in the model.

The projections are built on a conservative May–September window. Every euro from retreats, shoulder-season bookings, events beyond the 10 modelled annually, and ancillary services (chef, boat, car) is structural upside — not a projection.

Static assumptions throughout — no compounding applied. Current ADR at Villa Lev (€4,000 in 2026) already exceeds the Realistic model assumption (€3,500). All ADR figures are net of OTA commissions, VAT, and guest taxes. Events and retreats revenue beyond the 10 modelled annually is excluded entirely.

Ramp-Up Profile

Year 1 (2028) reflects a partial season at 75% of mature revenue, with full OPEX from Day 1. Full debt service (€492,943/yr) begins in 2029; the 2-year grace period covers the entire construction phase.

Year	Revenue	Total OPEX	EBITDA	Debt Service	DSCR
2028 (Y1 — 75% ramp)	€854,250	€237,500	€616,750	€216,402 (grace)	2.85×
2029 (Y2 — 88% ramp)	€996,820	€237,500	€759,320	€492,943	1.54×
2030 (Y3 — stabilising)	€1,129,750	€256,500	€873,250	€492,943	1.77×
2031+ (stabilised)	€1,169,245	€275,500	€893,745	€492,943	1.81×

* Revenue: villas (2×95nts×€3,500 net), suites (100nts×blended ADR), 10 events×€6,000 net, ancillary €75,000 base +10%/yr. OPEX phased maintenance: 0.5% construction Y1–2, 1.0% Y3, 1.5% Y4+.

Operating Cost Structure — Stabilised Year (2031+)

OPEX Category	Property A (per project)	Property B
Housekeeping — seasonal, shared team	€15,000	€13,000
Maintenance & repairs (1.5% of construction Y4+)	€21,000	€15,000
Utilities (electricity, water, internet, pool/spa)	€12,000	€12,000
Insurance (property + liability)	€2,500	€2,500
Property tax — ENFIA	€4,000	€4,000
Marketing & distribution	€4,000	€4,000
Management fee — Bucket 2A (5% gross rev; min €24k/villa)	€24,000	€24,000
Consumables, linen & spa supplies	€5,000	€5,000
Accounting & administration	€7,000	€7,000
TOTAL ANNUAL OPEX	€94,500	€86,500

* Portfolio OPEX = 2×€94,500 + €86,500 = €275,500/yr stabilised. Events staffing self-funded from events revenue. Management fee (Bucket 2A) = 5% of gross revenue; structural minimum €24,000/villa. Bucket 2B incentive fee (10% of GOP above 8% hurdle yield on initial equity) is a performance distribution — not in OPEX.

Realistic Scenario — Stabilised Year (2031)

95 villa nights/yr × €3,500 net ADR · 100 suite nights × blended €650/€920 · 10 events × €6,000 · Ancillary net €99,825

Revenue Stream	Annual Revenue	Annual OPEX	EBITDA
Property A — Villa Project 1 (95 nts × €3,500)	€332,500	€94,500	€238,000
Property A — Villa Project 2 (95 nts × €3,500)	€332,500	€94,500	€238,000
Property B — 4 Suites (100 nts × blended net ADR)	€314,000	€86,500	€227,500
Events — 10 events/year (net profit)	€60,000	—	€60,000
Ancillary Services — chef, boat, car (net profit)	€99,825	—	€99,825
PORTFOLIO TOTAL	€1,138,825	€275,500	€863,325

* EBITDA margin: 76.4%. DSCR: 1.81×. NCF post-VAT (7% effective net rate after input credits): €318,955. VAT of €81,847 is a cash deduction below EBITDA and does not affect DSCR. Margin, DSCR and NCF reflect the 2031 P&L timeline (98 villa nights / 103 suite nights, incorporating +3 nights/year growth from Year 3); the component breakdown above uses the mature base assumption of 95 nights per project.

Upside Scenario — Stabilised Year (2031)

108 villa nights × €3,800 net ADR · 110 suite nights × blended €700/€1,000 · 12 events

Revenue Stream	Annual Revenue	Annual OPEX	EBITDA
Property A × 2 Villas (108 nts × €3,800)	€820,800	€189,000	€631,800
Property B — 4 Suites (110 nts × blended ADR)	€374,000	€86,500	€287,500
Events — 12 events/year	€72,000	—	€72,000
Ancillary Services	€99,825	—	€99,825
PORTFOLIO TOTAL	€1,366,625	€275,500	€1,091,125

* EBITDA margin: 79.8%. DSCR: 2.21×.

Downside Stress Scenario

A simultaneous stress across all three drivers — not a linear revenue compression, but a compounded operational degradation scenario.

–10% Occupancy 88 villa nights · 93 suite nights	–5% Net ADR Villas €3,325 · Suites adjusted	4 Events / Year vs 10 in the realistic scenario
--	---	---

Year	Downside Revenue	OPEX	Downside EBITDA	Debt Service	DSCR
2028	€696,409	€237,500	€458,909	€216,402 (grace)	2.12×
2029 (first DS year)	€823,060	€237,500	€585,560	€492,943	1.19×
2030	€942,720	€256,500	€686,220	€492,943	1.39×
2031 (stabilised)	€976,897	€275,500	€701,397	€492,943	1.42×

DSCR of 1.42× in the downside scenario (–10% occupancy, –5% ADR, 4 events). Revenue would need to fall a further 29% from this already-stressed level before debt service coverage is broken — or approximately 34% from the realistic base case. In occupancy terms, break-even is reached at approximately 40 villa nights annually (commercial

loan path; TEPIX Loan path: 51 nights), equivalent to ~26% of a 155-day operating season. The project maintains positive free cash flow after debt service in every year from opening.

Metric	Break-Even	Downside	Realistic	Grant Path
Annual revenue	€768,443	€976,897	€1,138,825	€1,138,825
EBITDA	€492,943	€701,397	€893,745	€893,745
Annual debt service	€492,943	€492,943	€492,943	€261,849
DSCR	1.00×	1.42×	1.81×	3.41×
Villa nights / yr	~22 nights	86 nights	95 nights	95 nights
Free cash flow (net)	€0	€208,454	€318,955	€550,049
Buffer to break-even	—	–23%	–34%	–67%

Break-even at ~22 villa nights per year (grant path) — roughly equivalent to Villa Lev's very first season in 2022, before any brand recognition was established. Revenue must fall 33% from the realistic scenario before debt service is affected, or a further 23% from the already-stressed downside case.

Risk	Description	Mitigation
Construction cost & timeline	Cost overruns or delays could increase CAPEX or push the opening beyond Summer 2028.	Contingency of 10% of construction + FF&E built into CAPEX. Phase 2 drawdown conditional on permit issuance — lender exposure during construction is limited to Phase 1 plots (€1.35M), which serve as collateral for the interim period. Civil engineer has completed multiple luxury villas in this exact area.
Permit & regulatory	Building permit delays could affect the construction schedule.	All three plots sit within the FEK-designated village building limits of Agios Georgios. Buildability is a direct consequence of the FEK designation, not subject to interpretation. Permit preparation begins immediately upon Phase 1 drawdown; Phase 2 funding is conditionally gated on permit issuance.
Revenue & occupancy	Lower-than-projected occupancy or ADR would reduce EBITDA and compress DSCR.	Base case ADR (€3,500) is already 12.5% below current Villa Lev ADR (€4,000). Break-even occupancy is 40 nights — well below the 79 nights achieved in 2025 and 88+ nights in 2026. Five years of documented demand growth and an 18-month forward booking horizon provide empirical grounding for the projections.

Risk	Description	Mitigation
OPEX & cost inflation	Operating cost increases — particularly energy, staffing, and maintenance — could compress margins.	Inflation affects both sides of the P&L: costs rise, but ADR rises with it. Villa Lev has grown ADR 5–10% per year across five seasons, consistently outpacing general cost inflation. The model uses today's ADR with zero upward adjustment through 2028 — any inflationary ADR drift is pure margin upside. The project structurally benefits from moderate inflation. OPEX assumptions are conservative with no cost growth applied to the stabilised year.
Operational execution	Consistent service quality is critical to sustaining ADR and repeat bookings.	Villa Lev Group Management has been operating in this market for five years with a team structured across dedicated functions (housekeeping, maintenance, concierge, revenue management). Day-to-day operations run independently of the founder, mitigating key-person risk.
Accessibility & demand	Dependence on air and ferry access could affect demand in disruption scenarios.	Paros serves diversified international source markets across Europe and the Middle East. The Paros Airport upgrade for direct international flights is underway, which structurally extends the season and diversifies access routes. Guest profile (UHNW/HNW) is demonstrably price-insensitive and historically resilient to cyclical demand shocks.
Climate & external factors	Heatwaves, water stress, or low-probability macro disruptions (travel restrictions, geopolitical events) could temporarily affect activity.	Asset design integrates climate resilience. Extended shoulder seasons (April–May, October) are a structural advantage relative to higher-heat Mediterranean peers and partially offset peak-season variability. The project's low break-even and conservative financing structure provide buffer against short-term disruption. These risks are acknowledged and considered in the overall risk/return assessment.

STRESS-TEST SUMMARY

The project maintains debt service coverage with up to a ~34% reduction in revenues from the base case. In the formal downside scenario (–10% occupancy, –5% ADR, 4 events annually), DSCR remains 1.42× and the project generates over €208,000 in annual free cash flow after full debt service. Revenue must decline a further 29% from that stressed level before coverage is broken.

Liquidity & Debt Service Reserve

The project structure includes a €400,000 revolving working capital facility, equivalent to approximately 3.2 months of annual debt service. This facility serves as the primary liquidity buffer and de facto debt service reserve account

(DSRA) during the construction and ramp-up phases. It will remain available throughout the loan term as a short-term draw-down reserve in the event of any revenue shortfall.

Post-debt-service free cash flow in Year 1 (2028, grace period) is approximately €352,550. In Year 2 — the first full repayment year — free cash flow after full debt service is approximately €208,600 at the 88% ramp level, growing to €318,955 in the stabilised year. The project does not rely on reserves to service debt in any modelled scenario; positive free cash flow is generated in every year from first opening.

* The revolving working capital facility is self-liquidating within the first operational season. A formal 3-month DSRA escrow (≈€123,000) can be structured as a condition precedent to Phase 2 drawdown if required by the lender.

Financing Structure

Parameter	Property A (per project)	Property B
Total project cost	€2,171,000	€1,682,000
Loan (75%)	€1,628,250	€1,261,500
Equity (25%)	€542,750	€420,500
Annual DS (5% / 2yr grace / 13yr repayment)	≈€173,300/yr	≈€134,300/yr

Full Portfolio (A×2 + B): Total loan €4,630,500 · Total equity €1,543,500 · Annual DS from 2029: ≈€492,943/yr · Working capital: €400,000 revolving

** Grace period of 24 months covers the full construction phase. Working capital facility is revolving and self-liquidating by end of the first operational season.*

Collateral & Asset Coverage

The collateral position is the central lending thesis. At completion, the portfolio is a premium real estate asset in one of Greece's fastest-growing luxury tourism markets.

Portfolio	Built m ²	Value at Completion	Total Loan	LTV
Full portfolio — A×2 + B	950m²	≥€8,550,000	€4,630,500	~54%

1.85× Asset Coverage <i>Value ÷ loan at completion</i>	~54% LTV at Completion <i>Well below typical commercial lending thresholds</i>	€7,650/m² Stress Valuation (–15%) <i>€7,267,500 — still €2.64M above the loan</i>
--	--	--

At a stress valuation of €7,650/m² — 15% below the current Antiparos market rate — the completed portfolio value of €7,267,500 remains €2,637,000 above the total loan. The lender's exposure is fully covered by asset value, independent of operational performance.

** Valuation based on analysis of 40+ comparable properties currently listed in the Paros/Antiparos market. Detailed dataset available upon request.*

Debt Service — For Reference

Annual debt service of ≈€492,943 represents 55.1% of stabilised EBITDA (€893,745), leaving €318,955 in post-debt-service free cash flow (net of VAT). At the Upside EBITDA of €1,091,125, DSCR reaches 2.21× with free cash flow of €598,182. These figures are supporting reference; the primary security is the asset coverage position above, which is independent of cash flows.

Project Timeline

Phase	Duration	Target Dates
Loan approval & Phase 1 drawdown	—	Q2 2026
Plot acquisition (all 3 plots)	~2 months	Q2–Q3 2026
Building permit preparation	~6 months	Q2–Q4 2026
Construction — Properties A×2 and B	16–22 months	Q1 2027 – Q2 2028
Fit-out, commissioning & pre-opening	~2 months	Q2–Q3 2028
Operational launch	—	Summer 2028 (target)

Corporate Structure

The borrower is a holding company currently being incorporated in Greece, with three shareholders: a Greek tax resident, a French tax resident, and an Israeli tax resident. The holding company controls dedicated operating subsidiaries — one per property — each a standalone Greek company (IKE/AE) registered under KAD 55.10 (Hotels and similar accommodation), fully VAT-compliant and professionally insured. Villa Lev Group Management, the sister company responsible for all operational management, operates debt-free and carries no existing financial liabilities. Ownership and operations are cleanly separated at the entity level, providing lender clarity and structural flexibility.

Founder & Executive Director

Eytan Cohen

Founder & Executive Director

Eytan is a multi-sector entrepreneur who has led ventures across Europe, Africa, India, Israel and the U.S., building companies from inception to 8-figure revenues. Over 25 years, he has operated primarily in the tech industry, founding firms that grew to millions of users and managing a publicly listed telecom provider valued at €200 million.

In recent years, he expanded into boutique hospitality, developing Villa Lev — an 8-bedroom luxury property on Antiparos — which within two years became the #1 ranked rental property on the island and entered the global top 5% of all Airbnb listings. Villa Lev Group is the direct extension of that proven model.

Eytan brings to this project a track record of building at scale, a deep understanding of the Antiparos luxury market from five years of hands-on operation, and a management infrastructure already in place — ready to operate all three new properties from Day 1.

Management & Team

All properties are managed by Villa Lev Group Management under formal long-term exclusive contracts. The team has been built over five years of Villa Lev operations and covers housekeeping, maintenance, concierge, revenue management, marketing, wellness, and event logistics.

There is no cold-start, no new team to hire, no client base to build. The operational infrastructure is in place and will be transferable to the first new property from its opening day.

** Key-person continuity: Villa Lev Group Management is structured as a team operation, not a single-person dependency. The management, bookings, housekeeping and maintenance functions each have dedicated responsible parties with multi-season operational history. The founder's role is strategic and supervisory; day-to-day operations run independently.*

Operator Alignment Mechanism

Villa Lev Group Management operates all properties under long-term exclusive management contracts as a sister company, without direct equity in the property entities. Operator economics are structured across three buckets to align commitment fully with performance and provide lender comfort.

Alignment Mechanism	Minimum Threshold
Annual revenue floor — per property (×3)	€80,000 / property / year
Total portfolio revenue floor	€240,000 / year

** Bucket 1A: Eytan pledges up to €1,000,000 personal collateral during construction — not a fee, but skin-in-the-game documentation for lender. Bucket 1B — Deferred advisory fee: 10% of the TEPIX III grant amount, payable as an advisory fee from operating cash flow in the first three years post-disbursement (2029–2031). Structured outside grant proceeds to comply with GBER eligible-use rules. Bucket 1C: Performance ratchet at exit — 0% if IRR <8%, +9% if 8–22%, +29% if ≥22%; earned equity cap 33%, total cap 75%. Bucket 2A: 5% of gross revenue annually (structural minimum €24,000/ villa, senior to debt service). Bucket 2B: 10% of GOP above 8% hurdle yield on initial equity — paid only when hurdle is exceeded.*

The commercial loan case is the base case and stands independently. The instruments below represent structural upside that would materially improve the economics if secured — neither is a prerequisite for viability.

	Development Law 4887/2022 Grant	RRF 2 (Recovery & Resilience Facility)
Instrument type	Cash grant — non-repayable	Subsidised loan at 0.35%
Coverage	60% of non-plot eligible costs	50% of total project cost
Eligibility	Confirmed — Antiparos: max regional aid intensity zone (island <3,100 inhabitants)	Application to be filed — opening expected imminently
Benefit (full portfolio)	€2,894,400 non-repayable	≈€50,700/yr lower annual DS vs commercial rate
Structural impact on loan	Applied to loan reduction upon receipt — before Phase 2 drawdown	Replaces portion of commercial loan at 0.35% vs 5%

Impact on Loan Economics — Development Law Grant

€2,894,400	€2,459,700	≈€261,849	3.41×
Grant Received	Remaining Loan After Grant	Annual Debt Service After Grant	DSCR After Grant
<i>Non-repayable · applied to loan reduction</i>	<i>vs €4,630,500 commercial base case</i>	<i>vs ≈€492,943/yr — 47% reduction</i>	<i>Realistic scenario — vs 1.81× commercial</i>

Metric	Commercial Loan	+ RRF Path	+ Dev. Law Grant
Total loan drawn (€)	€4,630,500	€4,939,200	€2,459,700
Equity required (€)	€1,543,500	€1,234,800	€819,900
Equity saving vs. commercial (€)	—	€308,700	€723,600 (–47%)
Annual debt service (€)	≈€492,943/yr	≈€439,700/yr	≈€261,849/yr
DSCR — Realistic (2031)	1.81×	2.06×	3.41×
Net portfolio CF post-VAT (2031)	€318,955	—	€550,049

* Grant path figures reflect the grant being received before Phase 2 drawdown. At that point only Phase 1 equity of €337,500 has been injected. Both instruments are being applied for in parallel with this loan request. Rate: 5% on commercial and co-financing tranches; 0.35% for the RRF tranche. 2-year grace, 13-year repayment in all scenarios.

This project combines a proven hospitality operation with a disciplined land acquisition strategy and a well-structured commercial financing thesis. The demand is documented and growing. The plots are sourced and in advanced negotiation. The collateral position is strong. The commercial loan case stands on its own merits — and if the Development Law grant or RRF facility is secured, both the financing structure and the equity requirement improve substantially.

Proven demand. Refused bookings exceeded €300,000 in 2025 and approach €500,000 in 2026. The demand is real, growing and documented. This project does not create a new market — it provides capacity for one that already exists and is turning business away every season.

Scarce land. Panoramic, beach-proximate, buildable plots inside villa limits in this neighbourhood are genuinely finite. Three have been sourced, negotiations are at an advanced stage, and the window is now. This combination of attributes does not regularly come to market on Antiparos.

Strong collateral. A €4,630,500 facility secured against completed assets valued at ≥€8,550,000 — LTV ~54%, asset coverage 1.85×. Even at a 15% stressed valuation, asset value remains €2.64M above the loan. The lender's exposure is covered by asset value alone, independent of operating performance.

Operational infrastructure. Every property launches under long-term exclusive management contracts with Villa Lev Group, backed by five years of proven operations, an existing client base, and a formal operator alignment mechanism. There is no cold start, no team to build, no market to develop.

Financing optionality. The Development Law grant (€2,894,400, eligibility confirmed) would be received before Phase 2 begins — when only Phase 1 equity of €337,500 has been injected. The grant absorbs the bulk of construction costs, leaving a total equity requirement of €819,900 — €723,600 less than the commercial loan standalone. Annual debt service drops 47% and DSCR improves from 1.81× to 3.41×.

PORTFOLIO AT A GLANCE	STABILISED OPERATIONS (2031+)
Total investment: €6,174,000	Revenue: €1,169,245/yr
3 plots · 950m ² · 4 villas + 4 suites + wellness hub	EBITDA: €893,745/yr
COMMERCIAL LOAN	EBITDA margin: 76.4%
Equity required: €1,543,500	DEV. LAW GRANT PATH
Debt service: ≈€492,943/yr	Equity required: €819,900
DSCR (realistic): 1.81×	Debt service: ≈€261,849/yr
DSCR (downside): 1.42×	DSCR (realistic): 3.41×
